

Dialora

Your ASR benchmark is **lying** to you.

Production breaks what benchmarks never test.

dialora.ai

Dialora

**94% accuracy in
testing.
81% on real calls.**

Two vendors dropped double digits under production audio.

dialora.ai

5 things that actually separate ASR APIs.

- Telephony audio accuracy
- Latency at real concurrency
- Multilingual coverage
- Streaming vs batch mode
- Speaker diarization

Dialora

Best picks by what you **need**.

- 01** Deepgram, real-time latency
- 02** AssemblyAI, English + analytics
- 03** Google Cloud STT, language breadth
- 04** Azure Speech, Microsoft stack

Whisper wins batch accuracy. No real-time API.

Same benchmark. Different **failure mode.**

At 200 concurrent calls:

- p95 latency broke SLA
- Accuracy dropped 94% to 81%
- Only 1 of 3 vendors held steady

Dialora

340^{ms}

over her SLA at production scale.

3 weeks before the enterprise contract renewal.

Benchmarks test accuracy. Not your concurrency.

dialora.ai

Dialora

ASR is one layer of a **four-layer** problem.

Dialora has already built the other three.

dialora.ai

Dialora

Still guessing which ASR API to trust?

Test it on your own caller audio,
not a benchmark.

Start with Dialora
